

## Blockchain-Developer (m/f/d) – Part Time

Chaindrium is an IT services company focusing on the development of cutting-edge blockchain technology solutions in cooperation with our business partners and startups. The company was founded by a group of academic researchers and has grown to become a team developing, managing and advising highly sophisticated IT or blockchain projects in a customer-centric manner.

### Responsibilities:

- You are in charge of developing IoT and blockchain service platforms for digital products
- Design and implementation of company internal and external blockchain applications
- Documentation, testing and quality management

### Requirements:

- Basic understanding of blockchain technology, as well as some experience in developing blockchain applications and/or Smart Contracts
- Programming experience in one or more Smart Contract programming languages → Solidity, Liquidity, Michelson, etc.
- Self-reliant and structured way of working as well as a high degree of dedication, commitment and the ability to work in a team
- Additional knowledge in Python, Rust, Java or Go is an advantage

### What do we offer?:

- Minijob (450€) or a student employee position with the option to continue as full-time developer after finishing your studies
- Exciting and innovative projects
- Close Collaboration with both founders and a flat hierarchy
- The chance to quickly take responsibility
- Flexible working hours
- Home-Office
- International team
